

ClinOne |

RESEARCH SITE TECHNOLOGIES

June 2019

What we do

ClinOne is a **leading provider of mobile and web applications** that enhance and improve access for patients, caregivers and family members and site engagement.

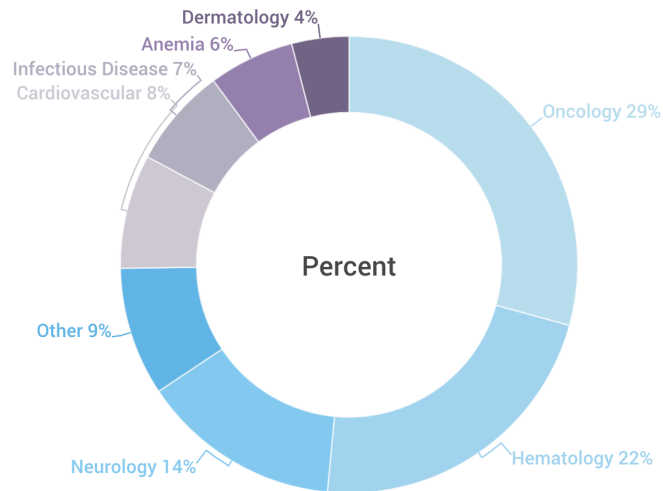

Where ClinOne studies reach

Utilized in nearly **3,000** trials across **55** countries

Broad range of
therapeutic
coverage and global
experience

Why a new solution is so critical

Trial designs continue to **increase in complexity**, technology can simplify the journey

The most **frequently cited FDA violation in clinical research** is by far “failure to conduct research in accordance with the investigational plan”

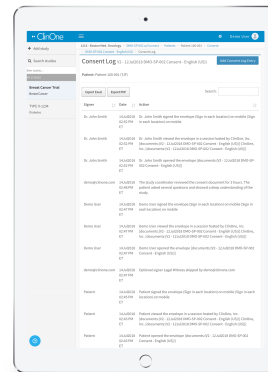

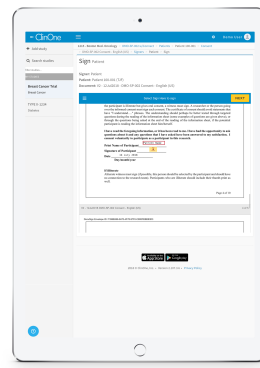

Nearly **50% of all sites recruit** one or no patients

30% of all clinical trial participants drop out before completing the study

Solution for research sites: Web and mobile clinical trial management suite

Mobile-first global clinical trial management operating platform

Complete clinical trial management

Provider referral management

Research site workflow management

Complete patient experience management

Patient compliance management

What ClinOne's delivered for studies

93%

Increase in Enrollment*

Through increasing the number of patients screened, constant updates, and managing provider referrals, ClinOne nearly doubles enrollment into clinical trials.

20%

Increase in Retention*

Through constant communication, engagement management the platform simplifies clinical trials and helps retain patients.

46%

Reduction in Deviations*

Through electronic consent (eConsent) and workflow management, ClinOne reduces missed procedures and incomplete consents by nearly half, saving site and CRA costs.

ClinOne integrated eLearning

Healthcare
Provider Referrals

Point-Of-Care
Screening

EHR Patient
Matching

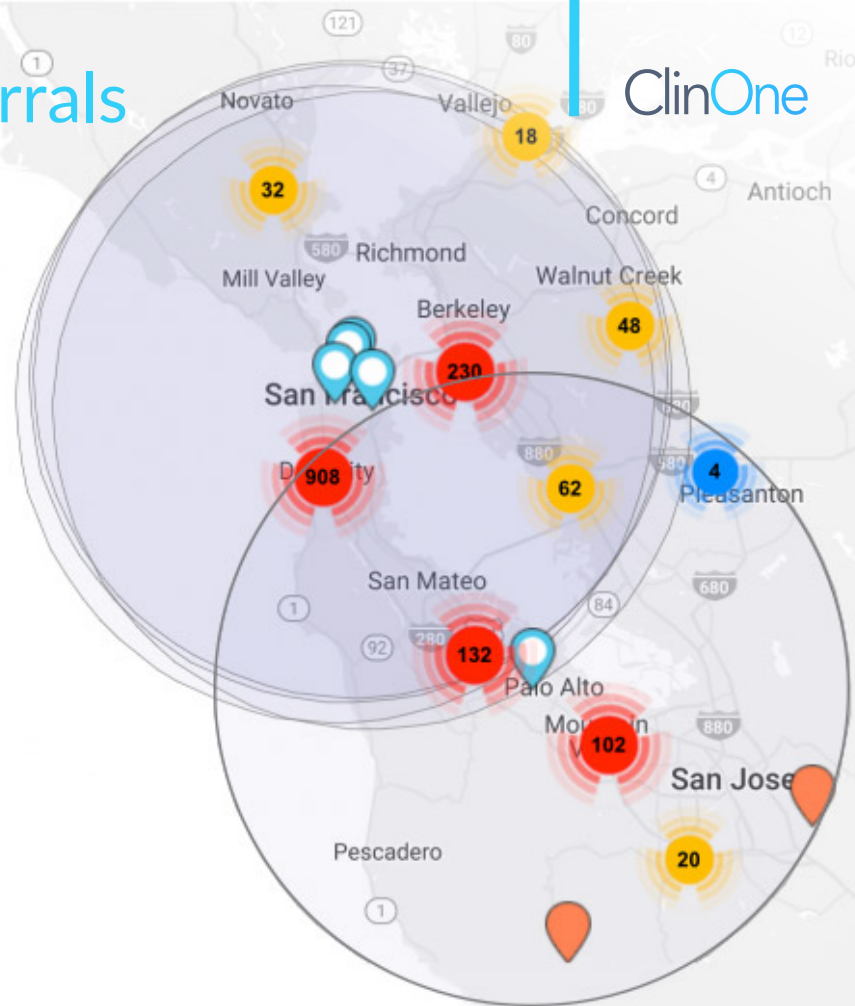

Automated enrollment into learning modules enables your users to **receive training** when certain actions take place.

Target an entire research team who recently received a new protocol version, or a single coordinator who just enrolled a patient into a specific study arm.

ClinOne healthcare provider referrals

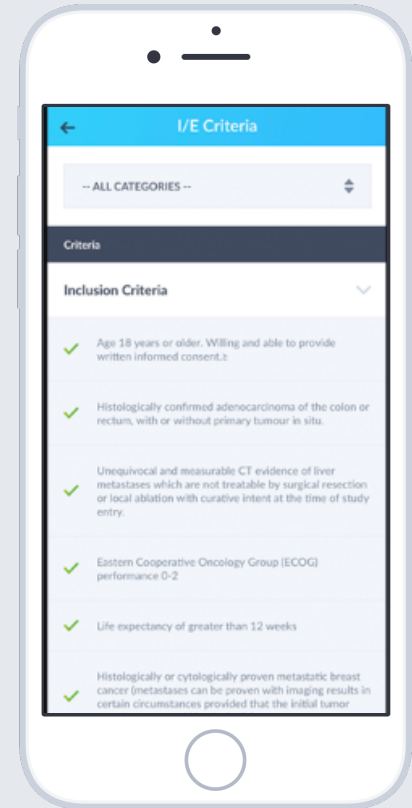

- **90% of physicians believe** their patients should have a clinical trial option, but fewer than 0.2% are referred to a trial, with a key reason being the inability to access information.
- ClinOne MD Referrals service **automatically distributes monthly 'Dear Doctor' letters** on behalf of the research sites to nearby referring specialists that meet the indication specialty for referring patients into a study.
- Letters are distributed electronically with dynamic **and frequently updated** non-confidential study content bi-monthly.

ClinOne

ClinOne point-of-care screening

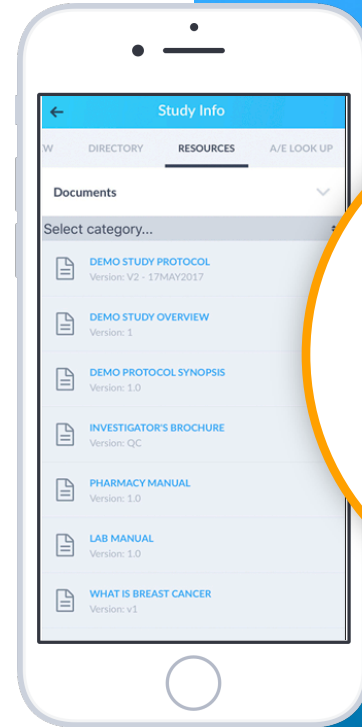

- ClinOne **provides screening at the point-of-care**, increasing enrollment by 24%.
- Through our mobile and web application, research teams can **access real-time, protocol version controlled screening criteria**.
- The **technology displays screening by study arm** and can display open and closed arms for real-time access to cohort options.
- System **displays open and closed cohorts** in real-time.

Immediate access to critical documents

ClinOne

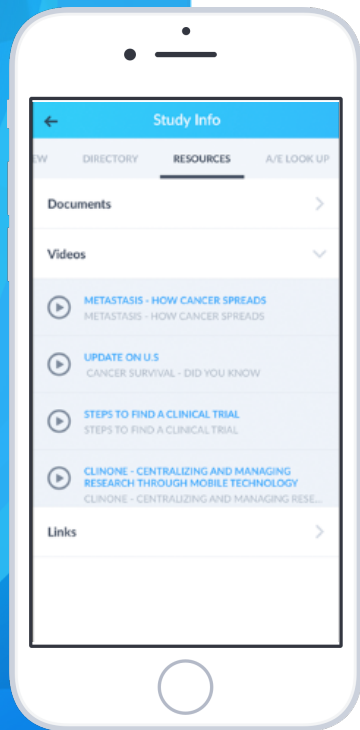

- ClinOne provides immediate access to critical documents through a global, version-controlled, amendment-specific delivery platform.
- Most widely utilized element within the core technology.
- Immediate print feature from user mobile device to a nearby Wi-Fi printer.

Users can share documents across their research teams.

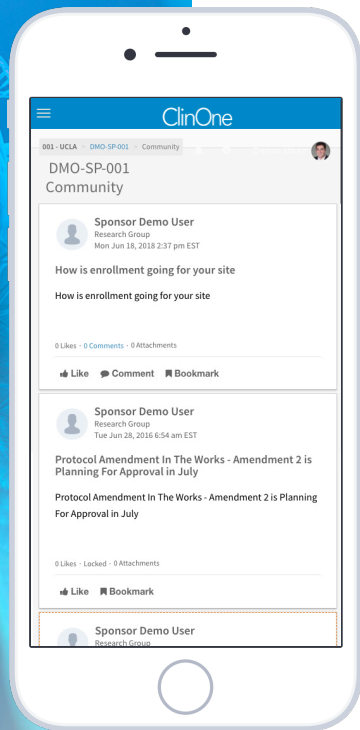

Delivering study documents & videos

- ClinOne's Digital Study Binder enables sponsors to provide the following:
 - Video updates
 - Recorded investigator meetings
 - CEO messages
 - KOL presentations
 - Training videos
 - Visual guidance for complex procedures
- All content is site version-specific

Building a powerful study community

ClinOne unifies research sites through its confidential digital community.

The technology provides sponsors with a platform to effectively communicate with hundreds of research sites and thousands of users across the globe.

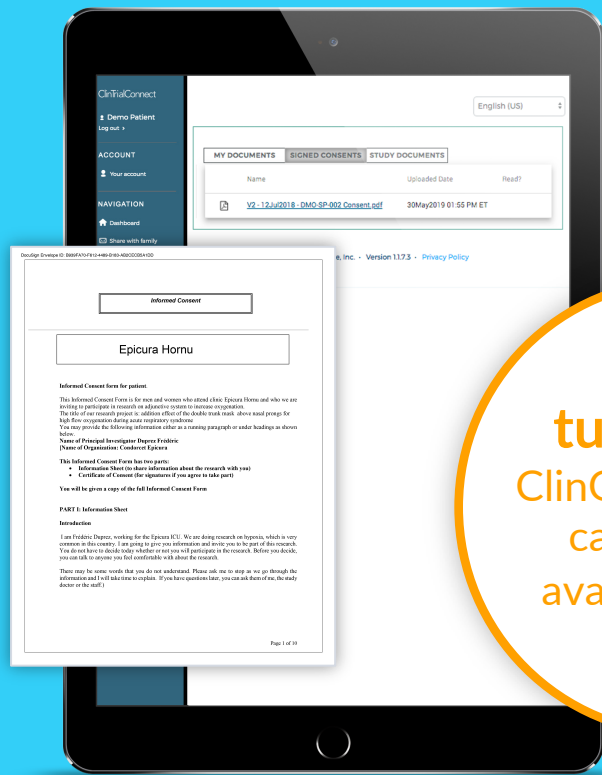

The community automatically builds a list of frequently asked questions for research sites to utilize as a resource.

Simple, powerful, effective eConsent

**Rapid
turnaround
ClinOne eConsent
can be made
available within
24 hours**

- ClinOne eConsent provides a simply-to-use consent technology based on an Apple iPad Pro powered by our current e-signature partner.
- ClinOne eConsent is highly flexible and can accommodate a broad range of signers, including those consenting remotely in low-risk consents.

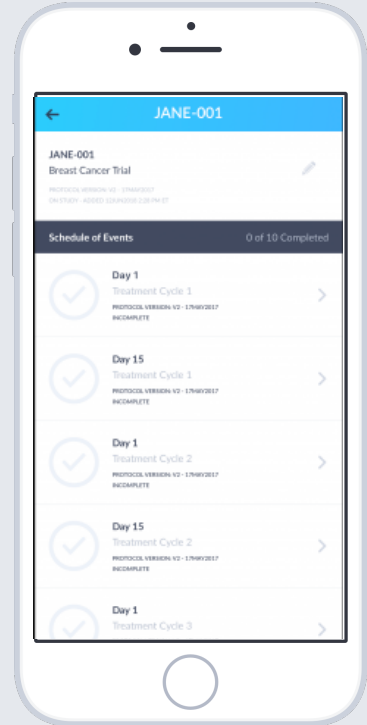

A single study can require research sites to **perform 400 to 800 investigational procedures per patient**, or as many as 140,000 procedures if they have enrolled 3 patients per study across their portfolio of 30 to 60 studies.

ClinOne provides a **powerful workflow management tool** to manage every single individual procedure to mitigate the potential of costly protocol deviations.

“

...

“I believe ClinOne is a required tool that fills a need in a greater clinical trial operations enterprise – thank you.”

Clinical Program Director
Stanford University

”

“Your solution is phenomenally helpful, our physicians love it. Thank you for what you provide to the global clinical research community.”
